Thera Mon[®]

OPTIMIZE
THERAPY SUCCESS

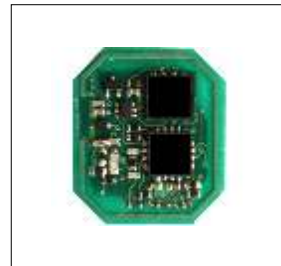

THE PROBLEM

Therapy success with dental braces is directly related to the wearing discipline of patients. Until now insufficient therapy progress was very difficult to investigate, as this could be caused from ineffective treatments or as a result of insufficient wearing time by patients. TheraMon® solves this complicated and sensible matter and puts dentists AND patients on the safe side!

TheraMon® = Therapeutical Monitoring

THE SOLUTION

TheraMon® consists of a tiny sensor modul embedded in dental braces and a reading terminal connected via USB to the computer. The sensor continuously checks the wearing time of the brace, results are stored into onboard memory. During regular therapy checks, this data can be viewed on the monitor which enables the dentist to relate therapy success directly to real wearing time of the brace. Further required treatments can be based on real facts instead of guesswork or subjective wearing time reports from patients, proper documentation can be archived for dentists and patients safety.

7 GREAT REASONS for TheraMon®

- 1 optimized interpretation of therapy success in dependency of real wearing time
- 2 continous documentation during the entire therapy endurance
- 3 easier handling of warranty repairs due to documented usage
- 4 higher wearing motivation for faster therapy success and shortened therapy endurance
- 5 earlier recognition of necessary adjustments (e.g. loss of brace during night rest)
- 6 detailed documentation for protection from non-justified discussions or claims
- 7 further therapy decisions based on proper documentation instead of guesswork
